Abstract

The text of your abstract. The `ajl-article` format is designed for scholarly articles, especially preprints. Its goal is to be lightweight yet customizable, with thoughtful typography and layout. The template is based off of Cory McCartan's `cmc-article` template, as well as Christopher Kenny's `ctk-article` template.

Keywords 3 to 6 keywords • can go here

JEL Codes: First JEL code here • Second JEL code here • and so forth

*To whom correspondence should be addressed. Email: jdoe1@example.org. Website: <https://example.org/>. ORCID: [0000-0002-1825-0097](https://orcid.org/0000-0002-1825-0097). Address: 1 Union St, Seattle, WA 98101. Acknowledgements here.

1 Introduction

Body of paper. Citations are easy to use (Metropolis et al. 1953). See Section 2 for a math demonstration.

2 Additional section headings here

cmc-article includes helpful math packages: mathtools, amssymb, amsthm, and physics by default. It also includes a default header .tex file with useful macros for math and statistics. Some of these are demonstrated in Eq. 1.

$$\begin{aligned} \mathbf{X} &\sim \mathcal{N}(\boldsymbol{\mu}, \boldsymbol{\Sigma}^2); & p(\mathbf{x}) &= \frac{1}{\sqrt{(2\pi)^k \det(*\boldsymbol{\Sigma})}} \exp\left(-\frac{1}{2}(\mathbf{x} - \boldsymbol{\mu})^\top \boldsymbol{\Sigma}^{-1}(\mathbf{x} - \boldsymbol{\mu})\right) \\ \mathbb{E}(Y) &= \sum_{y \in \mathcal{Y}} y \mathbb{P}(Y = y) = \sum_{y \in \mathcal{Y}} y \mathbb{E}(\mathbb{1}\{Y = y\}) \end{aligned} \tag{1}$$

The package also includes an `assump` environment for typesetting assumptions which can be referenced by easy-to-remember abbreviations.

Assumption IID. *The observations $X_1, X_2, \dots, X_n$ are independent and identically distributed.*

Assumption FE (Finite expectation). *For each $1 \leq i \leq n$, we have $\mathbb{E}[X_i] = \mu < \infty$.*

Theorem 2.1 (Weak Law of Large Numbers). *Let $\bar{X}_n := n^{-1} \sum_{i=1}^n X_i$. Then under ?? and ??, we have $\bar{X}_n \xrightarrow{p} \mu$ as $n \rightarrow \infty$.*

2.1 An example subsection heading

See Figure 1 for an example figure.

2.1.1 Level 3 heading

Testing that *italics* and **bold** text work.

2.1.1.1 Level 4 (numbered paragraph) heading

Text here.

Level 5 (paragraph) heading

Text here.

3 Conclusion

The final section of the main text.

Figure 1: Histogram of samples from a gamma distribution.
